

The background is a dark blue gradient with a complex, glowing wireframe pattern. This pattern consists of numerous interconnected points and lines, forming a mesh that resembles a stylized, abstract shape, possibly a large number '2' or a series of overlapping loops. The lines are a lighter shade of blue, creating a sense of depth and digital connectivity.

FINANCIAL PROPOSAL FOR INVESTORS.

Electron Financial Ecosystem - Financial proposal

We have created this financing proposal for investors with experience in the crypto market, who know the risks of investing in cryptocurrencies, in NFTs and in the general financial market. Although anyone is free to choose any of the packages that we have prepared for investors, we hope that they will be people who are prepared to face risks and adverse circumstances.

We're committed to carrying out everything that we have proposed in our Whitepaper, because we believe that all the changes that we have prepared, by launching our new blockchain, the NFT 2.0, the financial DApps, the metaverse and the oracles, are necessary, to allow the approach of people who still live centralized, to this wonderful and decentralized world that we are all already enjoying.

We're paving the way for people with less experience to make a living from decentralization, just like many of us. We know that our proposal is one of many that exist in the market at the moment, but we will do everything possible to integrate these proposals with ours, so that together we can further improve the crypto market, giving more opportunities, to all those who want to live from decentralization, to improve their lives. Because we believe that an important part of decentralized projects is the integration of projects that come together to achieve a much more robust and healthy expansion of decentralized projects.

We will continue to work to unite worlds, providing decentralized tools so that people can live comfortably, freeing people from the yoke of centralized institutions, so that our decentralized world will grow, become better and much healthier.

We recommend you read our Whitepaper, which is available on our website. Review it carefully, you can comment or ask whatever you want, because we intend to create a section on our website for frequently asked questions, with the questions that investors ask us. We will also be posting updates to our Whitepaper on our social networks. So we recommend you join our social networks, so that we all grow and improve together.

Electron Financial Ecosystem - Financial proposal

Important Considerations

When the creation of the blockchain is finished, all the tokens, all the cryptocurrencies and the access to the metaverse, will be sent to all the investors who have bought the investment packages, directly to their wallet address.

If they wish to sell, transfer or give away the investment package they have purchased, they can do so. Because all the holdings of the investment package will be sent to the wallet addresses that appear in the NFT registry of the investment package.

We will open lines of communication so that investors who buy investment packages can answer any questions they may have. In any case, we will be constantly posting updates from our entire ecosystem on the official social networks. We recommend following all official social networks.

All access codes, unique codes and special NFTs will be delivered to private investors before others, following the order of purchase; diamond, gold, silver, bronze and copper, so that they can be the first to use all the services of our financial ecosystem.

Investors should consider that we are launching a new blockchain, so it may be necessary to add the data from the new blockchain to your wallet, but we will be reporting everything on our social networks. So we recommend staying vigilant.

We will enable a Telegram bot so that all investors can optionally send us their contact information, which will be kept strictly confidential and will only be used to send package activation instructions, once the blockchain has been enabled.
